Week 4 – Use Cases and Mockups

 [mycookiebook](#)  [25. Oct 2020](#)  [Allgemein](#)  [Edit](#)

Hello Cookies,

last week we presented you our **use cases**. This week we worked on two of them in detail, specifying and creating use case activity diagrams and mockups. This two use cases can be found under the following links:

- [use case edit profile](#)
- [use case manage recipes](#)

Do you have any suggestions regarding our mockups and use cases? Let us know 😊

See you soon,

Your CookieBook-Team

PS: How do you like our blogposts so far? Maybe you have some suggestions to improve them.

Hello MyCookieBook-Team,

we really like your post for this week. Your Activity Diagramm for the Use Cases is very detailed and understandable. With the Mockup we get a great vision how a final version of your software can look like. It also help us to understand your Activity Diagramms.

There is one question about your Acitivity Diagramm for the Use-Case Edit Profile. At first to use a Legend here is a great idee. In your Legend there are four different Categories. Three of them are also Use Cases. We understand that these are “under” Use Cases of your Use Case Edit Profile. Is this correct or are they just complete Use Case on its own?

All in all your Style of Documentation give us a lot ideas for our own Project. So we will keep an Eye on your next Blogposts and we are very interessted to see how your project ist figured out.

PS: We found your Blogpost very good so far. You give us an very informative and a detailed vision of your project. So we can see at what point your are working in moment. Keep it up.

Greetings Socialyze Team (B3)

Hey Socialyze Team,
Thank you for your great Feedback. It helped us a lot to get some informations about our structure of the Blogposts and Documentation in general.

To answer your question.

First of all you perhaps mean the manage recipe Use-Case with its three sub Use Cases. We figured out, creating and editing a recipe should be a part of the management but their also a part of the CRUD. So as the best solution, we included all CRUD parts as sub USe Cases in the Use Case of manage recipe. We hope this answer clears your question.

Stay safe

Hello MyCookieBooks,

you did a great job in visualizing this weeks task. First some ideas to structure your blog posts. You could either embed the diagrams you want to show directly in the blog post or you can directly link the correct passage of your markdown file. (e.g.

<https://github.com/zhibekbastian/CookieBook/blob/main/docs/UC/editProfile.md#211-activity-diagram>)

The first diagram is easy to understand and well structured, but we found two minor problems. Firstly the start and end points should be outside of your system. Secondly we think there should be a condition inside the diamond. (Something like 'select')

Your mockups are perfect, we liked them very much!

For your second activity diagram (manage recipe) we have similar concerns. There also one condition missing and the start and end point are inside the system.

Also this seems to be more than one use case which you tried to separete with different colors. We don't think that's the correct approach and we would suggest you split the use cases into individual diagrams.

Your mockup for the recipe manager is also great!

All the best!

Hello LittleBeasts-Team

thank you for your kind Feedback.

We will consider your statement about the link to the correct passage in our next meeting.

About the start and endpoints in our activity diagrams. We only know that the start and end points should be defined in the system.

We understand your suggestion and figured out we can't describe a clear condition for every following case in our diagram.

To have a good clarity, we go without three clear condition symbols and use one symbol without text instead.

We hope you understand our reason.

For the activity diagram 'manage recipe' it shows only one Use-Case. We divided this Use-Case in the CRUD Sub-Use-Cases for a better readability.

In sincerity
